

## Working environment is at a premium at J.A. Plastindustri A/S

The Danish company J.A. Plastindustri A/S uses the PALOMAT pallet magazine as a permanent part of their pallet flow. An improved pallet flow, in which the employees now completely avoid touching pallets with their hands.

*"After our investment in PALOMAT, the manual handling of empty euro-pallets is now completely eliminated. With PALOMAT, you can handle pallets without having to touch them with your hands",* says Jan Lynge Nielsen, Production Manager at J.A. Plastindustri A/S.

At J.A. Plastindustri they handle 100 euro pallets every week. The PALOMAT is placed in the packing room close to the two packing belts, from which packing into boxes goes on. One empty pallet is fetched in the PALOMAT by a pallet

hand truck and is placed next to the packing belt. The boxes from the packing belt are stacked on the pallet, and when the pallet is full, it is moved to distribution. Another pallet is fetched from the PALOMAT, and the flow is repeated. When the PALOMAT is empty, it is stacked with pallets from stock.

Jan Lynge Nielsen adds: *"I knew about the pallet magazine PALOMAT from a previous workplace. We invested in the first produced PALOMAT in 1993. Since then I have had good experience with the pallet magazine and see it as a good tool in the daily work with pallet handling".*

**With PALOMAT J.A. Plastindustri A/S has achieved:**

- Elimination of heavy manual pallet handling
- Improvement of the working environment
- Happier employees
- Faster handling of empty pallets
- More order in the packing room
